

WB-X Wall Box

Large Capacity Wall Boxes

FSR

Metal Products Group

WB-X Wall Box

DESCRIPTION

The new WB-X Wallbox series is the latest addition to FSR's metal products line. These rugged all steel housings are available with either black or white locking covers. The stylish covers have "flip up" cable entry doors so that the cover door can be locked once the cables are connected. The door hinges and mounting screws are hidden for a sleek look.

There are three back box styles that are currently available in three different connector capacities for a total of nine possible configurations. The internal connector mounting plates handle either standard gang plates, FSR's extensive assortment of IPS inserts or "XLR" type connectors.

The WB-X "gang" style back boxes include factory mounted moveable high voltage dividers so that compartments containing AC line power can be isolated from low voltage and signal areas. Multiple gang arrangements are accomplished with a combination of supplied moveable dividers and spacer/filler panels.

The WB-X IPS and XLR style back boxes have tapped holes on the connector mounting plates for easy mounting, and are painted black.

All back boxes include installation brackets for mounting in old or new construction.

Ordering is simple: Specify the back box size and type. Then the cover color and matching size. (See the drawings and charts on the following pages for specific details and configurations.)

FEATURES

- Safe, secure cable management
- Low profile cover
- Locking cover door
- New and old work compatible, support wings are included with back boxes
- Fits within standard wall dimensions
- Tapped connector mounting holes for easy installation
