

Hoffman Enclosures Shelf Life Statement

As an accommodation to our customers, Hoffman Enclosures Inc. (“Hoffman”) provides information as to the typical MINIMUM Shelf Life of its products as listed below; however, Hoffman does not warrant Shelf Life nor assume any responsibility for such information. After expiration of the MINIMUM Shelf Life, or in situations where the product may not have been handled or stored properly, the customer is advised to evaluate the product for conformity with specifications and suitability for the use intended. Although there are exceptions, in many cases, if properly handled and stored, product will remain usable for its normal applications for a significant period beyond the MINIMUM Shelf Life.

Shelf life is based on the date of manufacturing. The actual manufacturing date can be found on the packaging label. If the product is also labeled, the product label has a date code on it. Cans of touch up-paint have a date code stamped into the bottom rim of the can.

Hoffman’s Standard Conditions of Sale provides a warranty guaranteeing that our products will, upon delivery to the customer and up to one year after delivery be free of defects in material and workmanship. However improper handling and storage after delivery can adversely affect product quality and Hoffman will not be liable for any resulting damage. *(Please see the Hoffman Warranty on the Standard Conditions of Sale document.)*

Hoffman recommends that enclosures be stored in the original cartons in a favorable environment (cool and dry areas) at 70°F. If stored as described enclosures, enclosure part accessories, electrical accessories, touch-up paint and other accessories have a MINIMUM shelf life of three (3) years from date of manufacture.
