

How To Install The Cable-Safe Cable Manager

1. Turn off power

Unplug all power and shut all devices down

2. Mount the Cable-Safe System

Choose a central location to mount the Cable-Safe.

Use the DeskClamp for mounting through grommet hole or on edge of the desk. Or, remove the clamp head and mount it with screws anywhere under the desk. Use the CableTrack to mount directly to the wall or side of desk.

Clamp on through grommet hole

Clamp on the edge of desk

3. Assemble the Cable-Safe

Configure the system to organize from 12 to as many as 30 cables.

for 12-14 cables
and related devices

Wall Mount Kit for
12-14 cables and
related devices

Double sided system
for 24 to 30 cables
and related devices

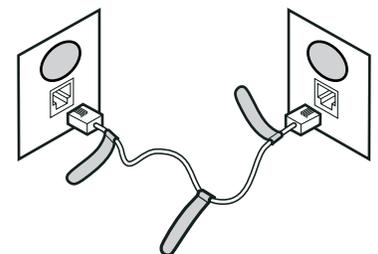

Mount with screws
on the wall or side
of desk

Mount with screws
anywhere under the
desk

4. Label cables on both ends and somewhere along the cable length

Labeling cables prevents improper connections and eliminates potential troubleshooting at restart. It also allows for quick, easy identification of all cables in future adds or changes.

5. Separate and untangle the cables

It's easier and faster to untangle cables when one end is unplugged.

How To Install The Cable-Safe Cable Manager

6. Hang power strip

Make a loop in the power strip cable and hang it on a hook or around the desk clamp stem.

Hang power strip

7. Stack hubs and power adaptors on shelf

Adjust the width of the shelf by lifting up on the hook to unsnap it. Move it to where it matches the width of your devices and snap the hooks in place.

Stack hubs so the cable connection come out the side or front for easy access and routing.

Place devices on shelf

8. Secure devices on shelf with bungee cords

Stretch bungee cords across one of the 16 bungee slots on outside of the CableTrack or one of the 3 bungee slots in each CableHook. To release just pull up out of the slot.

Secure devices with bungee straps

9. Absorb excess cable length into neat loops

To get neat loops, use one hand to drape your cable over a CableHook and hold the other hand below the hook about 8" to 10". Wind the cable from the hook down to your hand to absorb excess cable length.

Now, tie the loops on both ends with cable ties to make nice straight bundles. See how the cables are tied in the example below.

Make sure to leave enough excess cable length so it still easy to move your computer or mouse around on the desktop.

9. Hang thicker power cables on cable hooks first

10. Hang your data cables and...

Enjoy clean floors at last
